Spark arrestors required for off-road vehicles (ORVs):

- All off-road vehicles are now required to have a spark arrestor installed to reduce wildfire risks when operating on Crown land. A spark arrestor is a small screen or other device that is installed in an exhaust system to stop sparks or other exhaust residue from exiting the tailpipe.
- Many new models of ORVs already have a spark arrestor. Owners of older models that do not have spark arrestors will need to get them installed if they wish to operate the ORV on Crown land.
- A contravention could result in a violation ticket fine
- No drugs or alcohol are permitted on the ride
- **Note:** By participating in this event you agree to any photos of the event being used on our website and/or social media.
